SUMMARY

Data Engineer with a strong foundation in Python, SQL, and data modeling. Experienced in designing robust ETL pipelines, optimizing relational data architectures, and translating unstructured data into actionable, analytics-ready schemas. Dedicated to building clean, maintainable systems driven by the philosophy that clarity and data precede complexity and opinion.

EXPERIENCE

Build-Ora Aug. 2025 – Present
Co-Founder Bangalore, India

- Lead technical community engineering initiatives and architect collaborative infrastructure for large-scale builder events, focusing on open problem spaces and deep-tech execution
- Spearhead backend engineering, data modeling, and system design thinking workflows, translating architectural requirements into robust, deployable frameworks for developer communities

EVAP Solar Oct. 2024 – Dec. 2024
Data Analyst Intern Bangalore, India

- Managed and streamlined ETL pipelines using Python and SQL, performing rigorous data cleaning to optimize raw operational logs from EV charging and solar systems
- Developed and executed structured reporting workflows, converting complex operational metrics into efficient, relational analytical queries to ensure high data consistency and dashboard reliability

PROJECTS

RANGO | *React, FastAPI, ChromaDB, PyMuPDF, Supabase* 2026

- Architected an open-source platform for benchmarking, evaluating, and optimizing Retrieval-Augmented Generation (RAG) pipeline strategies and datasets
- Engineered the backend integration for vector embeddings and document parsing, establishing a robust environment for continuous AI performance analysis

Kasauti | *Python, API Integrations, Graph Analytics* 2026

- Developed a voice agent benchmarking and compliance testing web application supporting Hindi, Hinglish, Kannada, and Indian English implementations
- Implemented target runs, mock testing modes, and graph-based analytical tools to visualize execution paths and enforce compliance metrics

Study Buddy | *Python, LangChain, Streamlit* 2026

- Built an AI document-processing application utilizing LangChain for intelligent PDF text chunking and extraction
- Created a seamless Streamlit pipeline to automatically transform unstructured PDF inputs into highly structured, actionable study summaries

SKILLS

Languages & Backend : Python, SQL, C, FastAPI, LangChain, JavaScript
Data Engineering & Databases : PostgreSQL (Supabase), MySQL, ETL Processes, Data Modeling, Data Cleaning
Tools & Frameworks : Git, GitHub, Streamlit, React, Power Query, Excel, Power BI

EDUCATION

PES University Aug. 2026 – Present
Master of Computer Applications (MCA) Bangalore, India
